

Cloud Solution Engineer Focusing on Security Systems

At PDF Solutions, we're transforming the semiconductor and electronics manufacturing industry with our platforms that improves yield and lowers manufacturing costs at some of the largest chip makers in the world. PDF Solutions is the global leader of commercial semiconductor big data analytics solutions and is seeking an experienced, highly motivated Cloud Engineer to join our Cloud Development team. This growing team is responsible for designing, deploying and maintaining our public cloud-based Exensio® Big Data and Analytics Software.

The Cloud Engineer is responsible for using innovative approaches and public cloud infrastructure to enhance and adapt the design and architecture of the Big Data Analytics software to the SaaS platform. The Engineer directly contributes to the implementation of the core cloud services and deploys automation and provides continuous maintenance and upgrades of PDF Solutions' SaaS platform.

Location: Positions available in Vancouver, Canada,

Education

- B.S. or higher in Computer Science or Electrical and Computer Engineering

Responsibilities

- Participate in building customer environment on the Cloud
- Manage and maintain security systems and software, including SIEM, firewalls, intrusion detection systems, and anti-malware software.
- Manage security problem tickets. Log and monitor security events
- Architect and deploy network solutions in a single and multi-tenant cloud environment
- Configuration and implementation of the network firewalls and security lists.
- Proactively ensure the highest levels of systems and infrastructure availability;
- Participate in the continuous efforts to improve the design and architecture of our Cloud offering
